

A convincing product concept satisfies every wish in modern air humidification

Steam Humidifier Condair CP2

Electric steam humidifier Condair CP2 with electrode heating

The steam humidifier Condair CP2 is a pressure-less steam generator designed for direct or indirect room humidification, using regular tap water or partially softened water.

- 1 Voltage supply via main contactor
- 2 Elektrodes
- 3 Steam cylinder
- 4 Water fill cup
- 5 supply line
- 6 Outlet valve

A steam capacity of maximum 360 kg/h can be reached by sensibly chosen steam gradation. The lower capacity range has been extended by 2 and 4 kg/h.

All units can, of course, be continuously controlled

The Condair CP2 suits your needs perfectly:

- Simple dimensioning
- Clearly separated electric and water sections
- Easy access to electronics
- Simple maintenance
- Operated with tap water

In order to meet the individual needs of our clients, disposable steam cylinders as well as cleanable and reusable steam cylinders can be used.

Combined with the Condair CP2, the FAN ventilation unit distributes direct room humidity in offices and industrial plants or when humidifiers are installed at a later stage.

In combination with the Condair CP2, the multi-steam distribution system, OptiSorp makes very short humidification sections possible. The humidification distance is up to 4 times shorter than conventional steam distribution pipes.
