

"Option menu" populated from vb code (array list)

(Values in *.dlx file just empty)

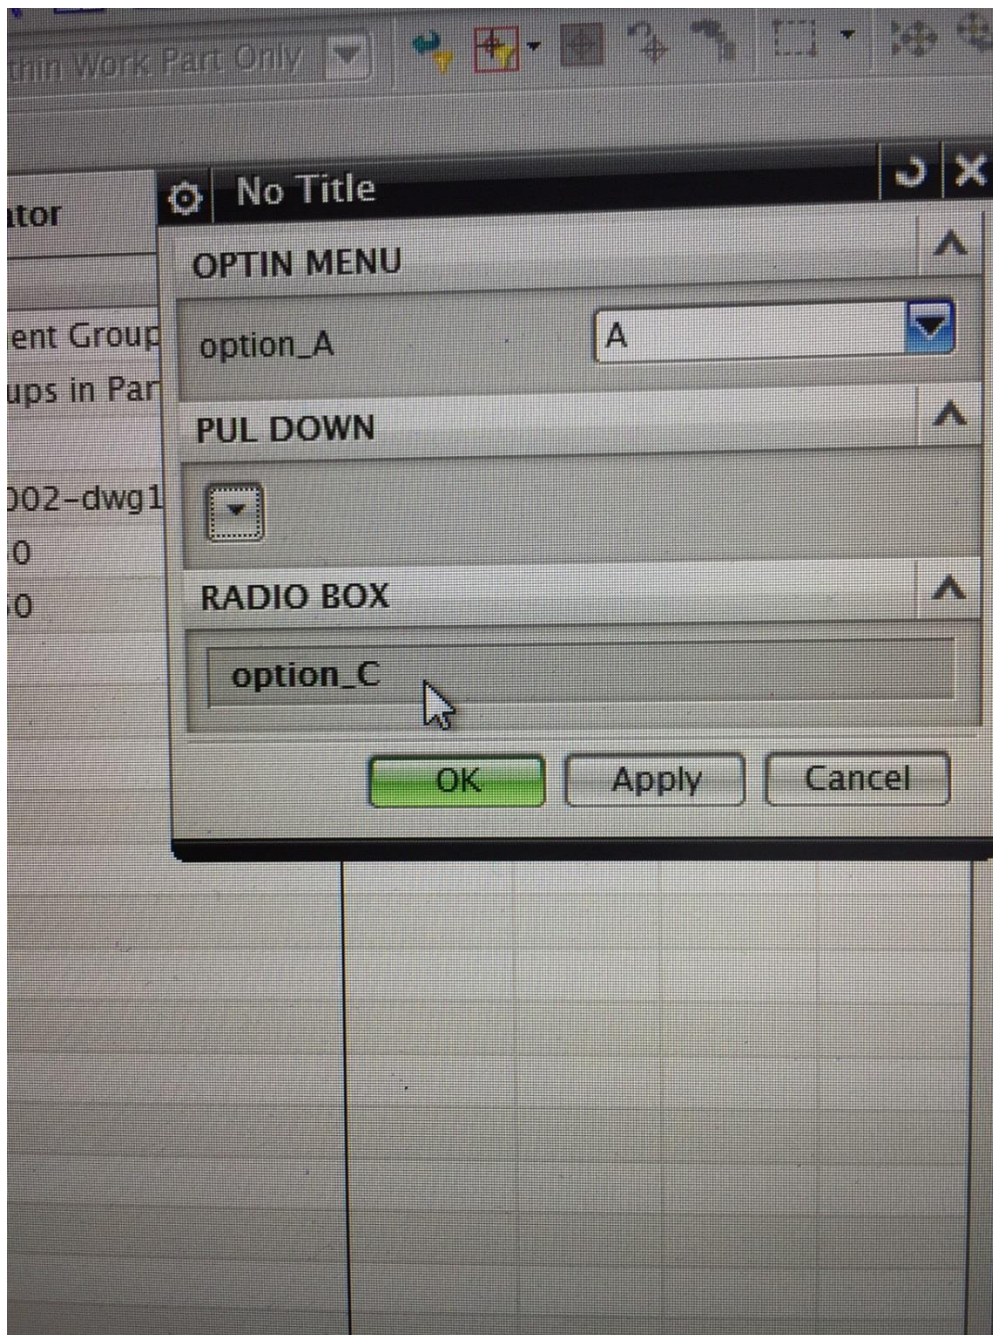

Works as expected

"Pull down" populated from vb code (array list)

(Values in *.dlx file just empty)

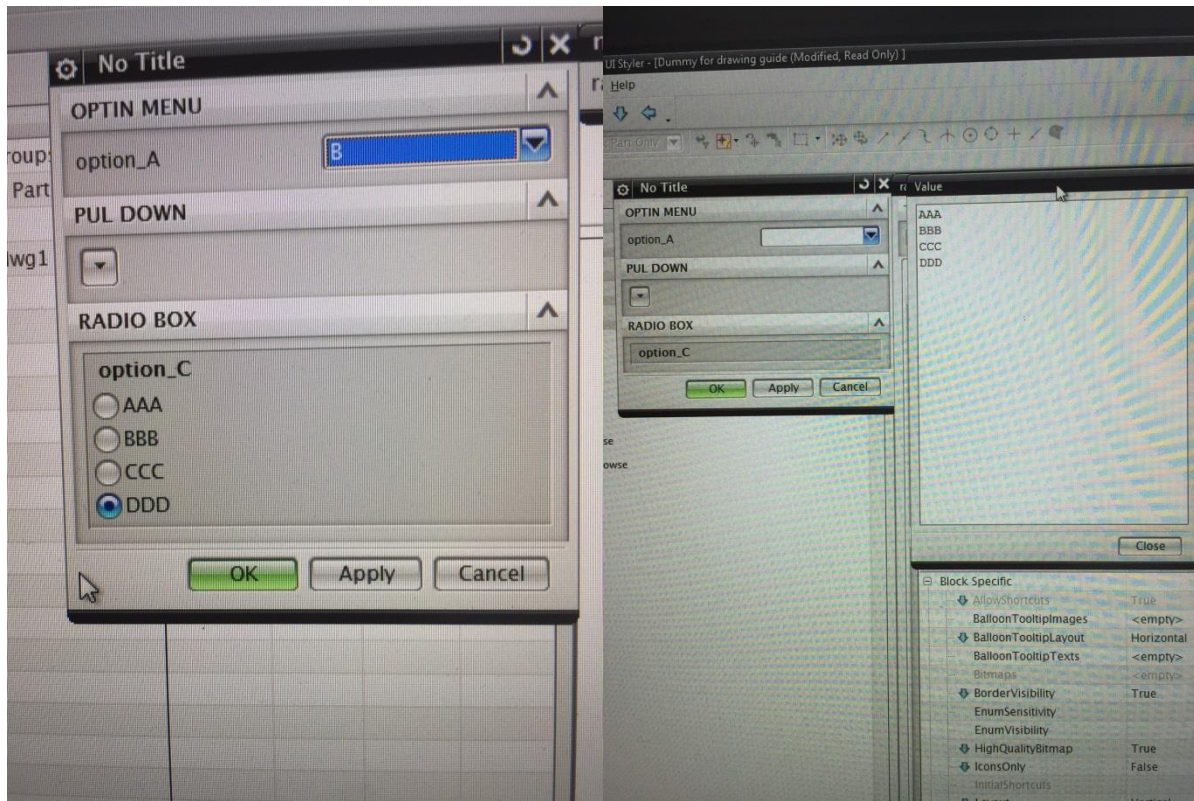

Works as expected

"Radio Box" populated from vb code (array list)

(Values in *.dlx file just empty)

Does not works as expected.....because no options present

"Radio Box" populated from inside *.dlx file

Now it works – but seems to be necessary to put the options inside the *.dlx, if option should be available in dialog...

I can live with this – but could be nice – if Radio Box's would be treated as Option menu or Pull down

```

EnumVariant.GetProperties().SetEnumMembers("Value", ToList) 'indeks fra Tolist til at beregne attribute nr i arraylist og skriver fra ENUM_menu
EnumVariant.GetProperties().SetEnum("Value", startvalue) 'finder eksisterende attr værdi og sætter i ENUM_menu

Return Tolist
End Function

```

Code snippet from my testing vb code...

ArrayList's is used to populate menu's in dialog....

In this case - program just set 3 partattributes – when program is executed again, it reads the already existing attributevalue's and the dialog should display these value's...
