

A diagram of a cylinder. A red line starts at the top edge, goes up and over the top, then curves down the side of the cylinder, ending at the bottom edge. Dashed lines represent the hidden parts of the cylinder's edges and the path.

A tall, narrow cylinder with a blue dot on its right side. The cylinder is oriented vertically and has a flat top and bottom. The blue dot is located on the right edge of the cylinder, approximately one-third of the way up from the bottom.
