### Wind Cone

#### Compliances:

FAA AC 150/5345-27: L-806 & L-807  
NASA Guidelines

#### Applications

A wind cone visually indicates prevailing wind direction at a particular location on an airfield or heliport. FAA Size 2 wind cones are used for airports at a central position on the airfield. FAA Size 1 rigid wind cones are installed at small airfields and heliports. FAA Size 1 frangible wind cones are called “supplemental wind cones” as they are installed in addition to the main wind cone adjacent to each runway touchdown zone to indicate local wind conditions. Wind cones are commonly supplied with a single obstruction light and four floodlights to illuminate the windsock.

The customer may select lighting, windsock color, and windsock material without affecting FAA approval. Rigid wind cones use hinged poles which allow the top windsock and lighting assembly to be lowered for servicing.

\* An “X” on the chart denotes a feature of that catalog number wind cone. Order lamps separately.

\*\* Size 1 = 8 ft. (2.4 m.) long windsock (WC-18)    Size 2 = 12 ft. (3.7 m.) long windsock (WC-36)

\*\*\* S302 Option Wind Cone is not ETL Certified.

#### Application Notes

- The voltage may be 120 or 220-240 if the proper voltage lamps are used. All lamps have medium screw (E27) bases. Order lamps separately.
- For connection to a series circuit, order option S302 and an isolation transformer or order the standard wind cone and a power adapter. The transformer or adapter may be directly buried or installed in an L-867 base with coverplate.
- Anchor bolts should extend 4 inches above grade.
- The Size 1 and Size 2 wind cone hinged poles are identical except for the tenon diameter.
