

Direct Pressure Reducing DOROT valves

MAIN FEATURES

The pressure reducing valve maintains, by varying its pressure drop, the outlet pressure at a constant value, when inlet pressure or the flow-rate are varying. and flow rate. The pressure redu-
The Direct- acting PRV are used:

- in water networks- to maintain a requested pressure in the supply main.

- in sanitary appliances: to maintain the water pressure constantly below the max. permissible value.
- in water networks- to save water. By controlling the pressure of the taps, excessive withdrawal of water and is avoided. Undetected Leakkages are reduced.
- in compressed air systems: to keep the constant air pressure in the main, regardless of fluctuations in pressure supplied by the compressors;
- To reduce and stabilize the pressure in the main, downstream of tanks or storage cylinders.

GENERAL

The DOROT pressure reducing valves Series DPR, DPR-F are of the balanced seat type. The inlet pressure, when acting on the two openings A and B with the same section, is compensated, and does not exert any force on the pin-plug system when the degree of valve opening changes.

Two forces act on the diaphragm: The outlet pressure creates a force that tends to close the plug, and is opposed by the spring mechanical force that tends to open the plug.

This results in the pressure reducing valve acting like a balanced seat type, where the outlet pressure is almost unaffected by variations in inlet pressure.

DPR

Diaphragm pressure reducing valve with single balanced seat. Ensures min. pressure drops with high flow rates. Downstream pressure set by means of the setting screw (4) and is locked with lock nut (3)

| Models | SIZE |
|----------|------------|
| DPR-1/2 | 1/2" 12mm |
| DPR-3/4 | 3/4" 20mm |
| DPR-1 | 1" 25mm |
| DPR-11/4 | 11/4" 32mm |
| DPR-11/2 | 11/2" 40mm |
| DPR-2 | 2" 50mm |

DPR-P

Like DPR, but with pressure gauge Ø50 for reading downstream pressure

| Models | SIZE |
|------------|------------|
| DPR-P-1/2 | 1/2" 15mm |
| DPR-P-3/4 | 3/4" 20mm |
| DPR-P-1 | 1" 25mm |
| DPR-P-11/4 | 11/4" 32mm |
| DPR-P-11/2 | 11/2" 40mm |
| DPR-P-2 | 2" 50mm |

SIZING

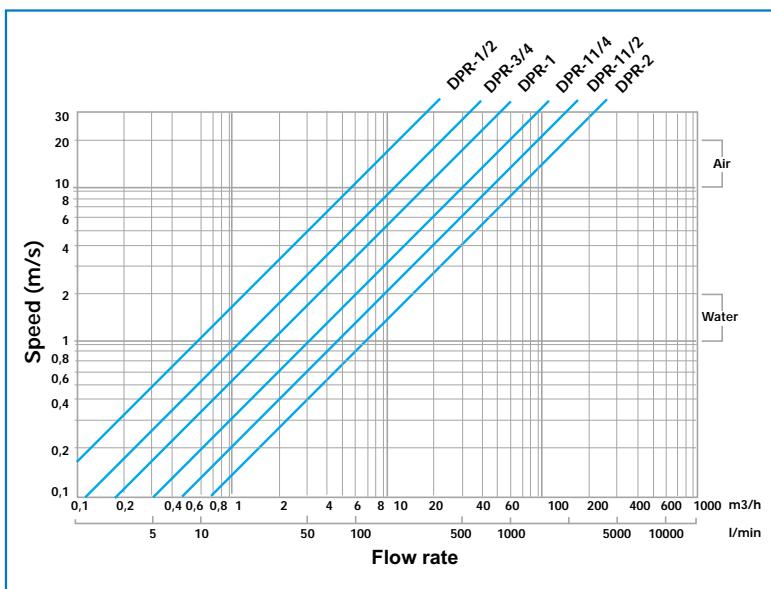

Excessive flow velocity generates too-high pressure drop and noisy performance.

Hence, it is very important that the valve size will be selected properly, considering the maximal flow rate the valve is supposed to regulate.

The diagrams at the right side, allow the selection of the valve size according to the flow velocity, that is caused by the flow rate (bottom axis).

It is recommended to select the valve that operates at flow velocity of 1-2m/s (water systems) and 10-20m/s (air systems).

Flow rate/speed diagram DPR,DPR-P,DPR-N,DPR-N-P,DPR-U

EXAMPLES OF SIZING

Example 1 (cavitation- see next page)

Operating conditions:

Inlet pressure P1 = 14 bar

Outlet pressure P2 = 3 bar

The cavitation diagram indicates that the valve works constantly in the red zone.

To avoid rapid deterioration, two valves can be used, connected in serial configuration:

Upstream valve: pressure difference 14 to 6 bar (green zone)

Downstream valve: pressure difference 6 to 3 bar (green zone).

Example 2 (flow rate-see next page)

Pressure reducing valve DPR/N with:

Inlet pressure (min.) P1 = 8 bar

Outlet pressure P2 = 4 bar

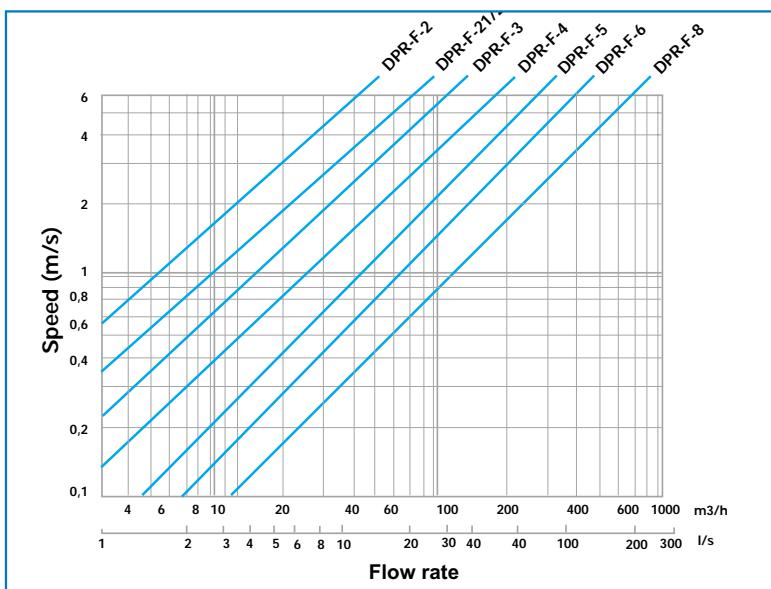

Max. flow rate Q = 50 l/min

The flow rate / speed diagram indicates that a diameter of 20 or 25 can be used. The pressure drop diagram (next page) indicates the minimal DP:

DPR-3/4 Q = 50 l/min DP = 1.1 bar

DPR-1 Q = 50 l/min DP = 0.68 bar

Flow rate/speed diagram DPR-F

CAVITATION

The cavitation diagram shows three zones of valve operation in relation to the upstream and downstream pressures, namely:

zone C: normal duty, no cavitation

zone B: medium duty, possible cavitation

zone A: heavy duty, the valve cavitates.

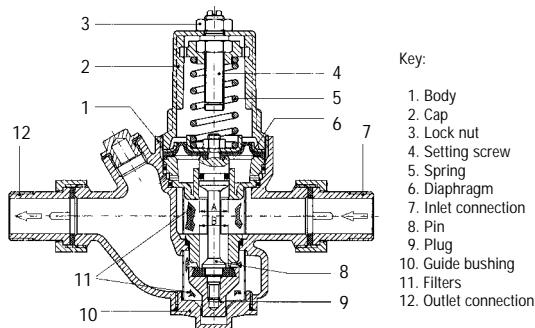

Continuous operation in the red cavitation zone causes rapid deterioration of the internal parts. If the pressure reducing valve is to be used in the red zone, please contact DOROT Engineering Department.

APPLICATION

Water, air and neutral (non aggressive) gases.

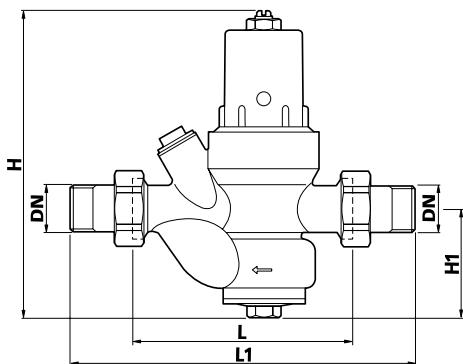

APPROVALS

- DVGW approval (Arbeitsblatt W 375)
- LGA approval (DVR15 to 32) according to DIN 4109 class I (noise below 20 dB)
- SVGW approval (W/TPW101).
- TIN approval (Poland)
- CSTB approval (NF P 43-006) (DRV15, DRV20).
- KTW certification for all materials in contact with water.

Diaphragm pressure reducing valve, single seated, with spring. Ensures min. pressure drop with high flow rates. Provided with high-capacity filter, having a separate connection for convenient cleaning.

Downstream pressure set by means of screw (3). Fitted with by-pass valve, that allows the release of excessive upstream pressure (generated, for example, by thermal expansion of boiler water) to the downstream side.

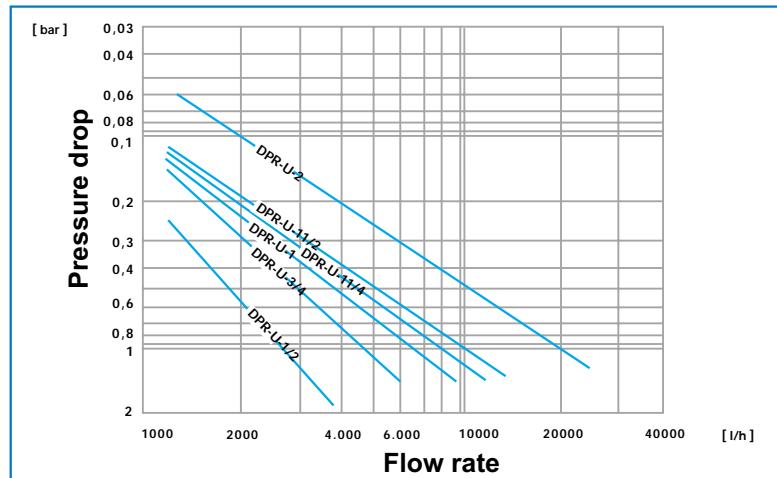

DESIGN FEATURES

| Max. operating temperature | 80° C |

Flow rate - Pressure drop diagram

APPLICATION

Water, air and neutral (non aggressive) gases.

DPR-F16-x-[A/B/C]

Flanged pressure reducing valve, single balanced seat and spring. Ensures min. pressure drops with high flow rates. Downstream pressure set by an adjusting bolt Ductile iron body, epoxy coated.

DPR-F25-x-[A/B/C]

Equal to DPR-F16, but max. inlet pressure 25 bar.

DPR-F40-x-[A/B/C]

Equal to DPR-F16, but max. inlet pressure 40 bar.
