You Can Speed Up Production by Using Our Cutting Facilities

Approximately six out of every ten orders received now call for some pre-production cutting. More and more customers are realizing that this is one way to contend with high production costs.

Here's our equipment line-up for steel structurals –

CSA G40.21

Standard for Structural Steels

Issued by Canadian Standards Association (CSA)

This standard, known as CSA G40.21 covers six types of structural quality plates, shapes and bars for general construction and engineering purposes.

The six different types covered are:

Type G – General Construction Steel

Type W – Weldable Steels

Type T – Weldable Low Temperature Steels

Type R – Atmospheric Corrosion Resistant Structural Steels

Type A – Atmospheric Corrosion Resistant Structural Steel

Type Q – Quenched and Tempered Low Alloy Steel Plate

AVAILABILITY

These seven strength levels and six types have been combined into eighteen grades as follows:

Type	Yield Strength ksi - mPa						
	33 230	38 260	44 300	50 350	60 400	70 480	100 700
G	33G 230G			50G 350G	60G 400G		
W	33W 230W	38W 260W	44W 300W	50W 350W	60W 400W	70W 480W	
T		38T 260T	44T 300T	50T 350T	60T 400T	70T 480T	
R				50R 350R			
A				50A 350A	60A 400A		
Q							100Q 500Q

TYPE G – A general construction steel meeting minimum strength requirements, but not recommended for low temperature service. Primarily designed for applications requiring bolting. However, can be welded under carefully controlled shop conditions, but not recommended for field welding where control may be difficult to maintain.

TYPE W – Weldable steels for general construction. Available in six strength grades. These steels are widely used for bridges and other dynamically loaded structures. Grade 44W is recommended for normal building construction where field or shop welding procedures are used. Not specifically recommended for low temperature applications.

TYPE T – Weldable, low temperature steel. A superior quality, weldable structural steel, with chemical composition that makes it suitable for low temperature applications. Possesses good notch toughness in the “as rolled” condition. Used for bridge construction for all types of loading. Certified minimum impact test requirement available. Easily weldable, using good shop or field practices, by all the usual methods.

TYPE R – Steels with an atmospheric corrosion resistance of approximately four times that of carbon steel without copper. This type of steel usually limited to $\frac{1}{2}$ " in thickness and up to this thickness may be readily welded using good shop and field practices. Most popular applications unpainted roofing, siding, fascia and curtainwall.

TYPE A – Top quality steels for plates and shapes. High strength, low alloy steels with good low temperature properties and providing good long term atmospheric corrosion resistance. Weldable in all thicknesses. Widely used in painted or unpainted condition for bridge construction, for exposed beams and columns and for other types of construction.

TYPE Q – QUENCHED AND TEMPERED LOW ALLOY STEEL PLATE. Steels that display a very high yield strength and good resistance to brittle fracture. Suitable for bridges and other structures. May be welded providing the techniques used do not adversely affect the properties of the plate.

COMPARISON OF PREVIOUS STANDARDS WITH CSA G40.20 AND CSA G40.21

Previous Standard	G40.21	Chemical Composition Comparison	Mechanical Property Comparison
CSA G40.1	–	Requirements entirely covered by CSA G40.20 “General Requirements”.	
CSA G40.4	33G 230G	Grade 33G has limits on maximum carbon and manganese contents.	Tensile strength of Grade 33G is 55-72 ksi while tensile strength of 40.4 is 60-72 ksi. Yield strength is same.
	33W 230W	Grade 33W has much tighter limits on maximum carbon, manganese and phosphorus.	Mechanical properties of 33W same as 33G above. Limited to 4 inches in thickness.
CSA G40.5 Grade D	33G 330G	Same comments as for G40.4.	Same comments as for G40.4.
CSA G40.8 Grade A	38W 260W	Slight reduction in maximum carbon and manganese contents in Grade 38W.	Yield strength of Grade 38W is 2 ksi lower in thicknesses of $\frac{5}{8}$ " or less (group 1 and 2 shapes), and 2 ksi higher in thicknesses over 1" to $1\frac{1}{2}$ " (group 3 and 4 shapes). Minimum tensile strength is reduced 5 ksi in Grade 38W.
CSA G40.8 Grade B	38T 260T	Virtually no change in chemical composition.	Same comments as for G40.8 Grade A.
CSA G40.9	–	Requirements entirely covered in CSA G40.20 “General Requirements”.
