

Symbols in Word and Excel 2007 & 2013:

The following symbols can be obtained in Word and Excel 2007 & 2013, using referenced keystrokes (numeric keyboard) and Arial font:

Table 1

Symbol	Keystrokes
±	Alt+0177
÷	Alt+0247
×	Alt+0215
¼	Alt+0188
½	Alt+0189
¾	Alt+0190

However, the following symbols and keystrokes work in Word only, **but not in Excel**, using Arial font as above:

Table 2

Symbol	Keystrokes	Map of characters
≤	2264+Alt+X	U+2264
≥	2265+Alt+X	U+2265
≠	2260+Alt+X	U+2260
∞	221E+Alt+X	U+221E
≈	2248+Alt+X	U+2248

Third column in Table 2 is shown on Windows Map of characters.

Can someone help me find the way to use a keystrokes combination to obtain characters in Table 2 in Excel typing directly in a cell and in a VBA macro?

Thanks in advance
Jano6924
