- Notes:
1. Minimum 1.5" bearing assumed.
 2. Connection of panel to supporting structure not investigated.
 3. Design thickness assumed 0.002" less than nominal thickness.
 4. Span lengths indicated by * are controlled by deflection.
 5. Since allowable loads and spans can be affected by actual conditions of use, information in these tables is intended for use by those qualified to assess these effects.

- Notes:
1. BWC374 section properties have been determined in accordance with the latest edition of the Cold Formed Steel Design Manual as published by the American Iron & Steel Industry (AISI).
 2. The section properties listed for BWC374 panel are to be used for the analysis of live loads acting perpendicular to the plane of the product.
 3. The Charted Load/ Span values account for the following:
 - A. Panel buckling strength
 - B. Deflection limit of L/180
 - C. Positive and negative wind considerations
 4. Load/ Span values do not include consideration of fastener capacity.
 5. Values include a 1/3 increase in "Allowable Wind Pressure".
 6. Since allowable loads and spans can be affected by actual conditions of use, information in these tables is intended for use by those qualified to assess these effects.
