

Code snippet:

CSS Style:

```
.divBirthday {
    white-space: pre;
}
```

HTML: Note, substitute , <textarea>, or <div>. It doesn't matter!!

```
<table width="100%">
  <tr>
    <td>Upcoming Client Birthdays:<BR>
      <span id="BIRTHDAYS" name="BIRTHDAYS" class="divBirthday"> </span>
      <div id="BIRTHDAYS" name="BIRTHDAYS" class="divBirthday"> </div>
      <textarea id="BIRTHDAYS" name="BIRTHDAYS" rows=8 cols=57> </textarea>
    </td>
  </tr>
</table>
```

Javascript code:

```
var newLine      = "\\n";          // "<br/>";   "\\r\\n";   "&#13;&#10;";

var numTotBirthdays = Lookup_ClientBirthdays ( numUsersFIRM_ID );
var x;
var oTextArea = document.getElementById( "BIRTHDAYS" );

if ( numTotBirthdays > 0 )
{
  // I have tried all of these.
  oTextArea.textContent = "Upcoming Client Birthdays:" + newLine;
  oTextArea.innerText   = "Upcoming Client Birthdays:" + newLine;
  oTextArea.innerHTML   = "Upcoming Client Birthdays:" + newLine;
  oTextArea.value       = "Upcoming Client Birthdays:" + newLine;

  for ( x = 0; x < numTotBirthdays; x++ )
  {
    // I have tried all of these.
    oTextArea.textContent += "      " + strClientBirthdaysDATE  [x] + " " +
strClientBirthdaysCLIENT [x] + newLine;

    oTextArea.innerText += "      " + strClientBirthdaysDATE  [x] + " " +
strClientBirthdaysCLIENT [x] + newLine;

    oTextArea.innerHTML += "      " + strClientBirthdaysDATE  [x] + " " +
strClientBirthdaysCLIENT [x] + newLine;

    oTextArea.value += "      " + strClientBirthdaysDATE  [x] + " " +
strClientBirthdaysCLIENT [x] + newLine;
  }
}
```

Screenshot of output For client security, I have redacted the actual names of the people.:

With or <div>:

```
Upcoming Client Birthdays:
10/23/1954 [REDACTED]<br>
```

With textarea:

Upcoming Client Birthdays:

```
10/23/1954      :r<br> 11/19/1985
F      l<br> 11/09/1952 S      o<br>
11/11/1998 Y      - - -      ><br>
```
