## DETAILS

### Save as Translated to STEP does not export the selected configuration

Modeling Mode: N/A

Data Case Checked-in to PRD: Yes

Description: The customer is not able to export to the desktop STEP files of only the visible components in an assembly configuration from a managed environment. Instead, all the components are exported.

Steps To Reproduce:

1. In SEEC open an assembly from Teamcenter.
2. Create a configuration and show a few parts. Save the configuration.
3. Save as Translated. You will get a message: "Managed translation cannot be performed for this operation due to the action defined by the preference SEEC\_Save\_Translation. Click Yes to translate the file and Save to disk. Click NO to cancel."
4. Click Yes. Define the translator as STEP and in the options select "Use Current Configuration" and "Export displayed only". Save to disk.
5. In Manage toggle off Teamcenter so that Solid Edge is standalone/unmanaged.
6. Open the STEP file as an SE assembly. You will see all components from the assembly, not just those from the configuration.

Additional Note: Repeat the steps in Solid Edge unmanaged - when you reopen the STEP file you will only see those parts which were shown in the configuration.

Video of workflow provided.

Workaround/Solution: N/A

Latest Version Tested: SE 2022 MP3/TC 13.1

File Specific: No

Abort: No

Root Cause: LA

Siemens Digital Industries Software believes that the problem you reported where Save as Translated to STEP does not export the selected configuration will be resolved by code changes made to the release of our product Solid Edge version 2023.

PR 10251748

Product Information:

- Product: **SOLID\_EDGE** , Application: **DOC\_MANAGEMENT** , Version: **V222MP2**
