Description
You can use the PrintWhen expression to change the fontstyles printed based on the values being printed. In this example, the detail line is printed in red for those products whose in stock is below the reorder level. Also, as that have been discontinued are printed in strikethrough.

Note This example uses an older strategy for handling conditional formatting. With latest version of VFP, you can use a Record-Listener class to handle the same scenario.

Product Inventory Report

Product	In Stock	On Order
1 Chal	39	0
2 Chang	17	40 (Stock below reorder level)
3 Aniseed Syrup	13	70 (Stock below reorder level)
