

Voice Recording to PC (USB) for

Norstar/BCM Telephones: M7100/7208/7310/7324/T7100/7316/7208

Meridian 1 Telephones: M2006/2008/2216/2616/3901/3902/3903/3904/3905

This Application Note describes desktop voice recording for almost any Norstar, BCM, or Meridian 1 digital telephone as listed above.

The 4102 USB Auxbox is typically installed at the desktop connecting to both the telephone digital wire loop and PC through a USB port. Information retrieved from the digital loop is sent to the PC for voice recording.

Calls can be recorded manually or automatically and call detail such as Caller ID or outbound dialed number, are captured and recorded. For manual recording, calls can be captured in their entirety by pressing the programmed hot-key on the telephone anytime during a call.

Software provided with the USB Auxbox allows call records to be played back over PC speakers, or emailed as attachments.

Requirements: 4102 USB AuxBox
Customer Supplied PC
 ≡≡ Windows 98SE, ME, 2000, XP
 ≡≡ Available USB port
