

Starting May 30, 2022, Google will no longer support the use of third-party apps or devices which ask you to sign into your Google Account using only your username and password. Going forward after that date, App specific passwords and 2 step verification will need to be setup in the Gmail account for continued functionality.

Navigate to Security and Signing into Google in the setup of the account:

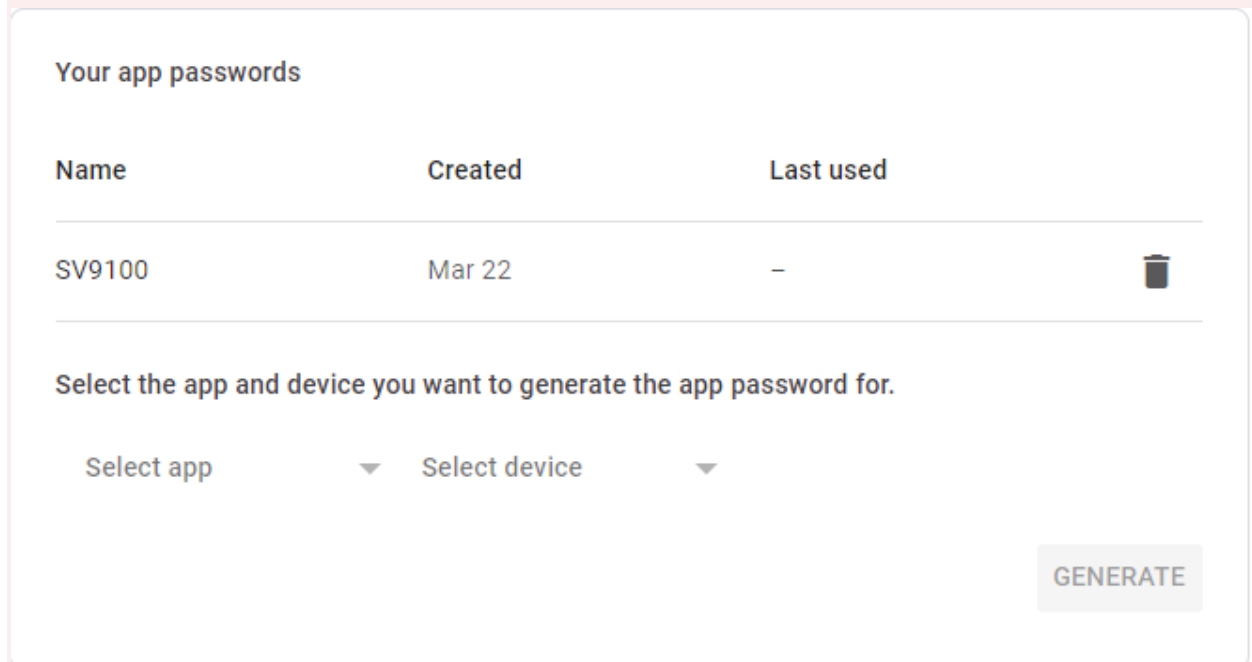

The screenshot shows the 'Signing in to Google' section of the Google Account Security settings. On the left is a navigation menu with options: Home, Personal info, Data & privacy, Security (highlighted), People & sharing, Payments & subscriptions, and About. The main content area is titled 'Signing in to Google' and features an illustration of a laptop, a smartphone, and a key. Below the illustration is a list of security settings:

Setting	Value	Action
Password	Last changed Jul 20, 2020	>
2-Step Verification	<input checked="" type="checkbox"/> On	>
App passwords	1 password	>
Google Account PIN	Last changed Aug 3, 2019	>

2 Step verification will then need to be setup. That basically means associating the account with a cell phone for verification purposes. Once that has been completed you can move on to the App specific password setup.

Choose App passwords, then create a new app and device to generate a password for.

The screenshot shows the 'Your app passwords' setup screen. At the top, it says 'Your app passwords'. Below this is a table with three columns: Name, Created, and Last used.

Name	Created	Last used
SV9100	Mar 22	-

Below the table, there is a trash can icon. Underneath the table, the text reads: 'Select the app and device you want to generate the app password for.' Below this text are two dropdown menus: 'Select app' and 'Select device'. At the bottom right of the screen is a 'GENERATE' button.

It can be named anything, but we usually stick with something simple like "SV9100". It will then generate a 12-character random password.

The screenshot shows a mobile application screen with a white background and a dark grey border. At the top left, the text "Generated app password" is displayed in a bold, dark grey font. Below this, on the left side, is a form with two input fields. The first field is labeled "Email" and contains the text "securesally@gmail.com". The second field is labeled "Password" and contains ten black dots. To the right of the form, the text "Your app password for your device" is displayed in a bold, dark grey font. Below this, a yellow rectangular box contains the 16-character app password "hazs qokv zcxw isek" in a dark grey font. Further down, the text "How to use it" is displayed in a bold, dark grey font. Below this, the instructions are written in a dark grey font: "Go to the settings for your Google Account in the application or device you are trying to set up. Replace your password with the 16-character password shown above. Just like your normal password, this app password grants complete access to your Google Account. You won't need to remember it, so don't write it down or share it with anyone." At the bottom right of the screen, the word "DONE" is displayed in a blue font.

That password will then need to be populated into MB 47-18-07.

Performing these steps will ensure continued functionality of voicemail to email integration.
